Abstract

Every living being is a material body and aura. When the living beings die, they don't have auras any more. Is the aura the Spirit, which leaves the material body when the living being dies? My lifelong studies found that the aura (Spirit) is a weak Nonlinear Electromagnetic Field (NEMF). Nonlinear fields do not dissipate and can imprint information. I found that the weak NEMF of the aura (Spirit) rules and regulates everything in the body (including the immune system), not with its strength, but with the information it carries. This article claims that the info-energy of a prayer should be able to boost the immune system though the informational field of the aura (Spirit). The article provides experimental evidence from Russian studies that praying does activate the immune system, especially at the higher frequencies. Evidence is also provided that Russian scientists found that praying activates the blood components including the erythrocytes, which are the defense soldiers of the immune system.

Keywords: Immune System; Informational Energy of Prayer; Praying Boosts the Immune System; Praying Activates the Erythrocytes

Introduction

Hypnotists found that people with sleeping Conscious calculate at least 10,000 times faster [1]. This means that we have in the Subconscious a more powerful computer superior to our conscious Digital Computer operating with a set of neurons. Now, when we make Quantum Computers, which are much faster and operate with informational fields (Nonlinear Electromagnetic Fields (NEMFs) which can imprint information), it is easier to convince the

reader that the powerful computer in the Subconscious must be a Quantum Computer about the existence of which we are not consciously aware because it is in the Subconscious [1]. Since my lifelong studies of the aura (aura means light) found that the aura is informational Nonlinear Electromagnetic Field (NEMF), obviously the Quantum Computer in the Subconscious operates with the waves of the informational NEMF of the aura (Spirit).

Since we are not consciously aware of the work of our organs, their function must be ruled by the Subconscious. The fact that all organs are holographically represented on the surface of the body (on palms, feet, ears, irises and the whole body) means that our organs are ruled on holographic principle. Since holographic (tri-dimensional) images are created only with laser light, obviously the functioning of our organs is ruled and regulated by the waves of the aura (light), which must be a laser type of light [2]. Therefore, the holographic representation of the organs on the surface of the body means that the Quantum Computer in the Subconscious (which deals with holographic images) rules and regulates the functioning of all our organs on holographic principle [1]. If so, the Quantum Super Computer in the Subconscious must operate with the waves of the aura (laser light), which I found to be weak informational Nonlinear Electromagnetic Field (NEMF) [1].

Measuring the Influence of Prayer on the Immune System

If the Quantum Computer in the Subconscious rules and regulates the functioning of all our organs and the Quantum Computer operates with informational field by changing with words of prayer the informational field (with which the Quantum Computer operates) or with autosuggestion, we can restore the normal functioning of our organs [1]. Russian studies found that prayer did influence the immune system [2]. They measured with infrared spectroscopy the blood before and after prayer to determine the informational influence of the prayer on the immune system (Fig. 1) [3].

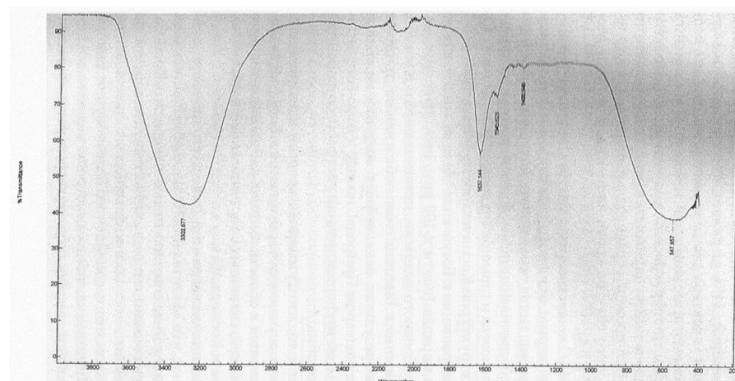

Fig. 1a Immune System of Healthy Person

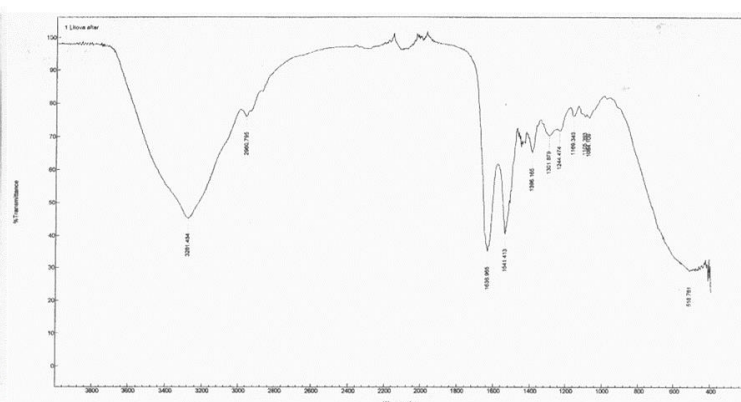

Fig. 1b Effect of Prayer on the Immune System of Healthy Person

Figure 1: a: presents the immune system of a healthy person before prayer, while; b presents the immune system of the same healthy person after prayer. One can see on Fig. 1b that the prayer activated the immune system especially in the high frequency area [3]. The results on these figures show that prayer (with its info-energy) could influence the informational field of the aura (Spirit), turn on the internal reserves of self-repair and restore the body harmony with the outside world. After prayer, the energy of the person was increased up to 100 times and the vibrational energy of his immunity shifted to higher frequencies.

The Russian infrared studies of the blood found that the blood was most sensitive to the influence of a prayer [3]. (Russian ultrasound studies also found that the blood was maximally sensitive to the influence of a prayer). The effect of prayer was strong not only on the blood, but also on the heart. It was found that prayer worked as informational energy correction, boosting the immune system and helping the body to find:

1. The optimal way of recovery
2. Prevent pathologies
3. Stimulate the recovery of the sick organs
4. Restore the system of self-regulation [3]

The Russian scientists colored different blood cells with different colors to determine how prayer changes the blood content. The results before and after prayer are presented on Fig. 2 [3]. Prayer increased the natural defense of the cells and their balance (PLT) and the Mean Platelets Volume (MPV). This speaks of balanced sympathetic and parasympathetic nervous systems [4]. Thus, prayer seems to be restoring the balance of the sympathetic and parasympathetic nervous systems, which were imbalanced by stress [4,5].

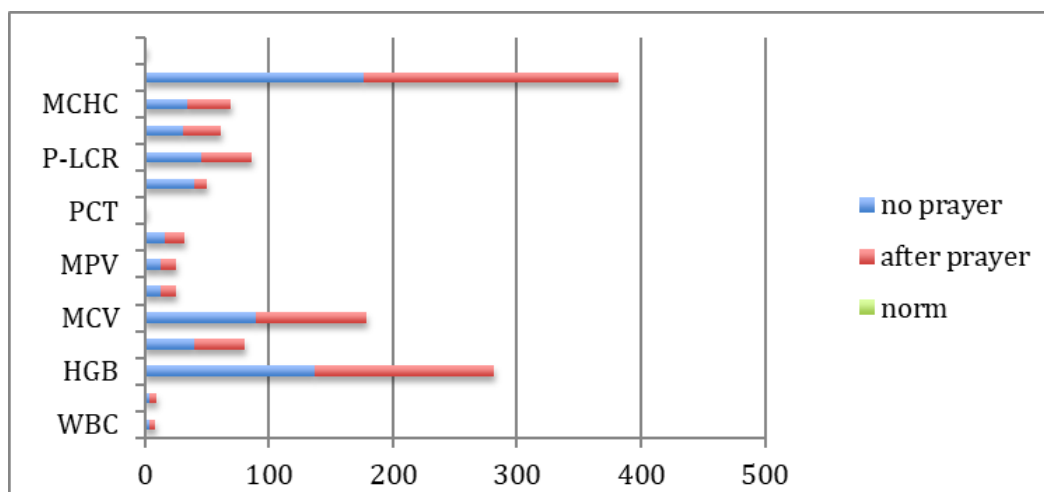

Figure 2: Pathology details.

Also, the erythrocytes in the bloods before prayer and after prayer were found to be dramatically different, they were doubled after prayer [3]. Since the erythrocytes are the soldiers that defend the body against germ-invaders, prayer can really boost the immune system. Also, the amount of Hemoglobin (HGB) was doubled after prayer, which means that after prayer twice more oxygen is provided to all organs and systems [3].

Conclusion

Thus, prayer is an informational influence on the weak informational Nonlinear Electromagnetic Field (NEMF) of the aura (Spirit), which rules and regulates everything in the body. This allows the prayer to:

1. Boost the immune system
2. Find optimal way of recovery
3. Prevent pathologies
4. Restore the system of self-regulation

Conflict of Interests

The author declares no conflicts of interest.

Journal of Clinical Immunology & Microbiology

ATHENAEUM
SCIENTIFIC PUBLISHERS

Publish your work in this journal

Journal of Clinical Immunology & Microbiology is an international, peer-reviewed, open access journal publishing original research, reports, editorials, reviews and commentaries. All aspects of immunology or microbiology research, health maintenance, preventative measures and disease treatment interventions are addressed within the journal. Immunologist or Microbiologist and other researchers are invited to submit their work in the journal. The manuscript submission system is online and journal follows a fair peer-review practices.

Submit your manuscript here: <https://athenaeumpub.com/submit-manuscript/>
