Abstract

This article is about how acupuncture heals. It all started 40 years ago, at the 8th World Congress on Acupuncture in 1983, where I reported nonlinear mathematical model of one acupuncture meridian. The nonlinear model predicted that beside the measured electric impulse, wave should propagate from the treated acupuncture point along the acupuncture meridian. The waves were found a year later and they were found to modify constantly running waves along the acupuncture meridians. Why do all living beings have constantly running waves along the acupuncture meridians? -downward on the back and upward in front. These are the waves of the weak Nonlinear Electromagnetic Field (NEMF) of all living beings, which being nonlinear, can imprint information. The waves (running downward on the back) scan the new environment and the waves running upward in front of the body bring the information about the new environment to the body, telling it how to change to adapt to the new environment. If the required changes to adapt are too big, the living beings evolve to new species. First, the NEMF is modified to adapt the new environment and only if the environment stays the same for a long time, the changed NEMF lead to changed DNA and new species develop with a new DNA. The weak informational NEMF rules and regulates everything in the body, not with its strength but with the information it carries and when this NEMF is out of balance, we restore the balance with acupuncture treatments generating waves. However, we can restore the balance (heal) with waves produced by our new quantum technologies instead of acupuncture needles.

Introduction

According to ancient books, acupuncture has been used in China since the time of the Chinese Emperor Huang Ti 2500 years ago [1]. I have published a book: "Modern Aspects of Ancient Acupuncture", which offers the acupuncture points of twice more diseases to be cured with acupuncture than the diseases treated in America [2]. Instead of the needles used in traditional Chinese acupuncture, the book offers a variety of modern noninvasive treatments of the acupuncture points (with magnets, electrical stimulation, infrared emission, lasers, etc.), which could be used with equal success. This is the only book on acupuncture that explains how acupuncture works.

My Mathematical Model of Year 1983 Predicted Waves Generated at Acupuncture Treatments

I have measured the acupuncture points; they are conducting ellipses oriented with their long axes along a line called acupuncture meridian. They are imbedded in the semiconducting tissue of the body. The waves propagating in such inhomogeneous media can be expected to be only nonlinear. Based on this, I knew in advance that to describe one acupuncture meridian mathematically, I would need nonlinear mathematical equation. Nonlinear equations have more than one solution. My nonlinear equation describing one acupuncture meridian had two solutions – electric impulse and wave [3].

Electric impulse running from a treated acupuncture point in the direction of the acupuncture meridian was measured by the Chinese, but nobody had measured waves. When I reported this at the 8th World Congress on Acupuncture in 1983, I bravely predicted that waves should be running from the treated acupuncture point in the direction of the acupuncture meridian. Hungarians showed interest to my predictions and invited me to give a talk at the Hungarian Academy of Sciences. I did, they provided money for research to find the waves and one year later Dr. Ayandok Eory reported they found the waves [4]. Waves were running along the acupuncture meridians all the time, but every treated acupuncture point was generating a wave that was modifying the constantly running waves along the meridian. The Hungarians didn't go farther to find the nature of the constantly running waves, but I did.

The Nature of the Constantly Running Waves along the Acupuncture Meridians

All living beings have unlimited possibility to adapt to new environment and if the new environment is drastically new to evolve to new species. Since nonlinear fields do not dissipate and can imprint information, to be able to adapt to new environment, the living beings have Nonlinear Electromagnetic Fields (NEMFs) to scan the new environment. The body system of acupuncture meridians offers waves running downward on the back along the acupuncture meridians - a perfect opportunity for scanning the new environment. The imprinted information (about the new environment) is brought back to the body by the upward running acupuncture meridians in front of the body, telling it how to change to adapt to the new environment.

Dr. Levin in Israel experimented with Planaria Worms [5]. They have the following interesting feature: When Planaria Worms are cut into two halves - the half with the head develops a tail and the half with the tail develops a head and the two halves develop as two worms. Since when a cell is fertilized, it becomes polarized first and from the positive end the head of the embryo will develop and from the negative end the tail will develop Dr. Levin was curious to see what will happen, if after cutting the Planaria Worms into two, he changes the polarization at the cut. When he cut the Planaria Worms into two and changed the electrical polarization at the cut, he had worms with two heads and worms with two tails.

The interesting thing was that the two-headed worms had the DNA of the cut worms, but when multiplying the two headed worms were giving birth to two headed worms. Dr. Levin didn't have explanation to it, but I do [5]. Obviously, the field form of the worms (their NEMF) handles the adaptation to new environment. If the required changes (to adapt) are too big, the living beings evolve to new species. Their NEMF changes first and only if the new environment stays the same for a long time, the changed NEMF evolves into changes in the DNA. (How wise!) Thus, the NEMF of all living beings (which includes the acupuncture meridians and the waves running along them) handles their adaptation to new environment and their evolution to new species.

I was intuitively driven to study the aura, which I found to be weak NEMF. My lifelong studies of the aura NEMF showed that the aura is brighter at positive emotions and dimmer at negative emotions [6,7]. Since we say we are in high Spirit when experiencing positive emotions and we say we are in low Spirit when experiencing negative emotions, I concluded that the aura must be our Spirit. Then I found that the ancient Jewish Cabala was teaching to high priest that the aura is our Spirit, which confirmed my conclusion. The fact that the weak field of aura (Spirit) is Nonlinear Electromagnetic Field (NEMF) and nonlinear fields can imprint information explains the role of the aura (Spirit) NEMF in the adaptation to new environment.

The weak aura (Spirit) NEMF also rules and regulates everything in the body (or handle the regulating mechanisms) of all living beings and do this not with its strength, but with the information it carries [7]. If something in the regulation mechanisms (i.e. NEMF) is out of balance, it could be brought back to balance with acupuncture treatments, which by generating waves modify the running along the acupuncture meridians waves of the aura (Spirit) NEMF. Thus, acupuncture treatments restore the balance in all living beings by restoring the balance of their regulation mechanisms, which are handled by the weak informational NEMFs of their auras (Spirits).

Our science acknowledged the importance of the informational fields only after we started building Quantum Computers. In a number of articles, I revealed that we all have a Quantum Computer in the Subconscious (operating with the waves of the informational NEMF of our aura (Spirit) [8]), but we are not consciously aware of its existence because it is in the Subconscious. It is the source of our intuition and our intuitive creativity [9]. In my articles and books, I underlined that our Creator wisely

restricted the access to our powerful Quantum Computer to only highly spiritual individuals who meet some moral criteria. I claimed that if we are wise, we should do the same with the Quantum Computers we create.

Conclusion

The article revealed how acupuncture works. Along the acupuncture meridians run waves and these are the waves of the informational NEMF of the aura (Spirit), which rules and regulates everything in the body. If the regulating mechanisms (ruled by this NEMF) are out of balance, they are brought back to balance with acupuncture treatments, which create waves modulating the running waves of this weak informational NEMF. However, instead of using acupuncture treatments that generate waves, we can use new Quantum technologies (with waves) to restore the balance of the informational NEMF of the aura (Spirit) and restore the health balance.

All living beings have this weak informational NEMF, which is responsible for the unlimited possibilities of all living being to adapt to new environment. The waves of this informational NEMF running on the back downward along the acupuncture meridians scan the new environment and the waves with imprinted information run in front of the body along the acupuncture meridians telling the body how to change to adapt to the new environment. If the required changes are too big, the living beings evolve to new species. First, the NEMF of the living beings' changes and only if the environment stays the same for a long time, the changed NEMF leads to changed DNA.

Conflict of Interests

The author declares no conflicts of interest. The authors alone are responsible for the content and the writing of the paper.

Journal of Clinical Immunology & Microbiology

Publish your work in this journal

Journal of Clinical Immunology & Microbiology is an international, peer-reviewed, open access journal publishing original research, reports, editorials, reviews and commentaries. All aspects of immunology or microbiology research, health maintenance, preventative measures and disease treatment interventions are addressed within the journal. Immunologist or Microbiologist and other researchers are invited to submit their work in the journal. The manuscript submission system is online and journal follows a fair peer-review practices.
